Design and Manufacture

Hy-Lok tube fittings have been designed and manufactured with great care to meet the specifications required for a wide range of applications in chemical, petrochemical, oil refineries, power generation, shipbuilding, pulp and papers, semiconductor micro-electronics, etc. Each Hy-Lok tube fittings consists of four parts; body, front ferrule, back ferrule, and nut. The two-ferrule design, front and back, compensates for any tolerances in tube O.D., wall thickness, material hardness and always ensures outstanding leak-tight connections.

Torque and Distortion during Installation

When the nut is tightened, the back and front ferrules move axially. This axial movement does not allow any torque transfer from the fitting to the tubing, and the mechanical properties of tubing are maintained.

During makeup, the back ferrule moves in such a controlled manner that the tubing is not overstressed and the tubing I.D. is not excessively reduced, resulting in safe operation under high pressure or vibration. The front ferrule does not force the body to expand, which allows the nut to be back off easily for disassembly and allows multiple remakes.

Easy Reference

Table headers are differentiated with color;

Materials

| Table 3. Typical Material Specification | | | | | | | | | |
|---|--|---|--|--|--|--|--|--|--|
| Material | Bar Stock | Forging | | | | | | | |
| Stainless Steel Type 316 | ASTM A479, ASME SA479 | ASTM A182, ASME SA182 | | | | | | | |
| BRASS | JIS C3604BD ⁴ , ASTM B16 Alloy 360 | JIS C3771BE ⁴ , ASTM B283 Alloy 377 | | | | | | | |

- ① Carbon Steel Hy-Lok tube fittings are supplied with 316 stainless steel back ferrule.
- ② Alloy 600, 625 & C-276 Hy-Lok tube fittings are supplied with alloy 825 back ferrule
- ③ See the UNS S32750 Super Duplex Hy-Lok tube fittings catalog, H-200TF-SD.
- 4 Manufacturer's standard materials.

Pressure Ratings

Hy-Lok tube fittings are rated to the maximum working pressure of tubing recommended for using with Hy-Lok tube fittings.

The maximum working pressure of tubings are listed in *MAWP Table* on the following pages.

Note: Material strength and allowable working pressure decrease as the temperature increases.

Temperature Ratings

The following temperature ratings are applicable.

• 316 Stainless Steel : -425°F to 1200°F

(-245°C to 649°C)

• Brass : -65°F to 400°F

(-54°C to 204°C)

• Monel : -325°F to 800°F

(-198°C to 427°C)

Carbon Steel : -20°F to 800°F

(-29°C to 427°C)

Tubing

Variety of tubing materials and wide range of wall thickness can be used with Hy-Lok tube fittings. However, it is essential to specify, select, and handle the tubing with care in order to ensure reliable, safe, leak tight installation using Hy-Lok tube fittings.

Some general rules are shown below.

- 1. The tubing material must be compatible with process fluid.
- Temperature, pressure, vibration and shock conditions must be considered when selecting the wall thickness, Further, extremely thick wall may not be properly deformed and extremely thin wall may be collapsed by ferrule action.
- The metal tubing must be softer than the fitting materials. In general, metal tubing should be fully annealed to work properly with Hy-Lok tube fittings.
- For leak tight installation, the tubing surface finish must be smooth and free from weld seam, scratches and draw marks.
- 5. The tubing with high tolerance in ovality or O.D. may not fit in the fitting or may cause improper performance.
- Best performance is achieved when the tubing ends are squarely cut and deburred properly.

The followings are the recommended tubing specifications for best performance with Hy-Lok tube fittings.

Stainless Steel Tubing

Fully annealed seamless type 304 / 304L, 316 / 316L to ASTM A269 or equivalent with hardness Rockwell Rb90 or less.

Copper Tubing

Seamless soft annealed temper O60 with hardness 60 max.(Rockwell hardness, 15T) to ASTM B75, or seamless water tubing type K or type L annealed temper O60 with hardness 50 max. in coils or annealed temper O50 with hardness 55 max.(Rockwell hardness, F) in straight lengths to ASTM B88, or equivalent.

Monel Tubing

Fully annealed seamless Alloy 400 to ASTM B165 or equivalent with hardness Rb75 max.

Gas Service

Gases have very small molecules and can escape through minute leak paths due to surface imperfections.

These leak paths can be coined out when heavy wall tubing is used as it resists the ferrule action more than thin wall tubing does.

The minimum wall thickness for gas service is shown below.

Fractional Tubing

| | | _ | |
|--------------|-----------------------------------|--------------|-----------------------------------|
| Tubing OD | Nominal Min. Wall Thickness | Tubing OD | Nominal Min. Wall Thickness |
| 1/8" | .028" | 3/4" | .065" |
| 3/16" | .028" | 7/8" | .083" |
| 1/4" | .028" | 1" | .083" |
| 5/16" | .035" | 1 1/4" | .109" |
| 3/8" | .035" | 1 1/2" | .134" |
| 1/2" | .049" | 2" | .180" |
| 5/8" | .065" | | |

Metric Tubing

| Tubing OD | Nominal Min. Wall Thickness | Tubing OD | Nominal Min. Wall Thickness |
|--------------|-----------------------------------|--------------|-----------------------------------|
| 3mm | 0.8mm | 18mm | 1.5mm |
| 6mm | 0.8mm | 20mm | 1.8mm |
| 8mm | 1.0mm | 22mm | 2.0mm |
| 10mm | 1.0mm | 25mm | 2.2mm |
| 12mm | 1.0mm | 28mm | 2.8mm |
| 14mm | 1.2mm | 32mm | 3.0mm |
| 16mm | 1.5mm | 38mm | 3.5mm |

Temperature Derating

The working pressure varies depending upon the temperature. The working pressure at various temperatures can be obtained by multiplying the working pressure at ambient temperature (-20°F to 100°F or -29°C to 37°C) by the temperature derating factor in the table shown below.

| Table 4. Temperature Derating Factors | | | | | | | | | | |
|---------------------------------------|-------|-------|--------|-----------|--|--|--|--|--|--|
| Temperature(°F) | 316SS | 304SS | Copper | Monel 400 | | | | | | |
| 100 | 1.00 | 1.00 | 1.00 | 1.00 | | | | | | |
| 200 | 1.00 | 1.00 | 0.80 | 0.88 | | | | | | |
| 300 | 1.00 | 1.00 | 0.78 | 0.82 | | | | | | |
| 400 | 0.96 | 0.94 | 0.50 | 0.79 | | | | | | |
| 500 | 0.90 | 0.88 | - | 0.79 | | | | | | |
| 600 | 0.85 | 0.82 | - | 0.79 | | | | | | |
| 700 | 0.82 | 0.80 | - | 0.76 | | | | | | |
| 800 | 0.79 | 0.76 | - | 0.76 | | | | | | |
| 900 | 0.78 | 0.73 | - | - | | | | | | |
| 1000 | 0.76 | 0.69 | - | - | | | | | | |
| 1100 | 0.62 | 0.49 | - | - | | | | | | |
| 1200 | 0.37 | 0.30 | - | - | | | | | | |

Example

To obtain the working pressure of 316SS 3/8" O.D. x 0.035" wall tube at 1.200°F

- Working pressure of the above tubing at ambient temperature : 3,300 psig
- Temperature derating factor at 1,200°F: 0.37
 Working pressure at 1,200°F: 1,221 psig (from 3,300 psig multiplied by 0.37)

Tube Bends near Fitting

For leak tight installation, tube bends must not be too close to the fitting. the following is the recommended minimum straight length of tube measured from the tube end to the bend.

| Tube OD | 1/8" | 1/4" | 3/8" | 1/2" | 3/4" | 1" | 1 1/4" | 1 1/2" | 2" |
|----------------|--------|--------|--------|---------|--------|--------|--------|----------|--------|
| Min. Length | 23/32" | 13/16" | 15/16" | 1 3/16" | 1 1/4" | 1 1/2" | 2" | 2 13/32" | 3 1/4" |

Also, the bending radius should not be too short of bending radius may affect the working pressure and may cause insufficient flow. Minimum bending radius is usually recommended by the tube bender manufacturer.

Tube Selection and Handling

Hy-Lok tube fittings perform best when good quality tubing is used. Tubing should be considered a fitting component.

Tubing selection by relying only on ASTM or other equivalent specifications is not enough. Here are some points to be considered.

- 1. Materials and manufacturing method
- 2. Material hardness
- 3. Surface finish
- 4. Outside diameter and its tolerance
- 5. Wall thickness and its tolerance
- 6. Ovality
- 7. Concentricity
- 8. Packing and transportation

Always try to use good quality tubing for best performance.

Tubings must be handled with great care in transportation and in storage to avoid damage to the surface. Copper tubings must not be crushed or lose its circularity. If necessary, the tubing must be covered and tubing ends must be plugged to be kept from dirts.

Maximum Allowable Working Pressure (MAWP) Table

 Working pressure calculated in accordance with ASME B31.3, Chemical Plant and Petroleum Refinery Piping Code, 2014 Edition

Table 5. Stainless Steel Tubing

Fully annealed 304 or 316 high quality seamless stainless steel tube to ASTM A269 or equivalent.

- Unless otherwise specified, allowable working pressure is calculated from ASTM A269 tubing and an S value of 20,000psi (137,800kPa) for ASTM A213 tubing at -28°C \sim 37°C (-20°F \sim 100°F) as specified in ASME B31.3 and ASME B31.1 respectively.
- Based on minimum wall thickness and maximum O.D. allowable by ASTM A269
- For welded tubing, the following derating rate to be applied for weld integrity. (ASME B31.3 2014 Edition, Table A 1B) for double welded tubing: 0.85 for single welded tubing: 0.80
- To determine bar, multiply psig by 0.0689 and to determine kPa by 6.89

Note:

- 1. All calculations are based on maximum outside diameter and minimum wall thickness without allowance for corrosion and erosion.
- 2. Care should be taken for temperature rating if tubing is coated or plated.
- 3. Figures shown are not for design purpose but for reference only and the accuracy of information here is not liability of our company.

General Technical

Identification of Hy-Lok Metric Tube Fittings from Fractional

These two are similar in appearance. To avoid any confusion and for ready identification, the stepped shoulders are machined on the body and on the hex nut of metric size tube fittings as shown. The metric tube nut must not be used on fractional body, and vice versa

ISO Parallel and Tapered Pipe Thread

International Standards Organization(ISO) standardized the nomenclature of some international pipe threads. ISO 228/1 is a parallel thread and ISO 7/1 is a tapered thread. With 228/1 parallel thread, the seal is usually made by metal-to-metal contact against the female port or with a gasket. Shown below are two different seals. There are several different descriptions as listed below.

ISO Parallel with Metal Gasket Seal

A metal(usually copper) gasket performs the sealing between the reverse bevel of the fitting and the surface surrounding the female threads.

ISO 7/1 tapered thread looks similar to NPT thread. However, ISO 7/1 has 55° thread angle while NPT has 60°, and ISO 7/1 the number of threads per inch may differ from NPT. There are several different descriptions as listed on the right.

REFERENCE SPECIFICATIONS:

- 1. BS 2779(BSPP)
- 2. DIN-ISO 228/1
- 3. JIS B0202
- 4. ISO 228/1

ISO Parallel with Bonded Washer Seal

No reverse angle is used. Instead, a self centering taper is used at hex to center a composite washer (usually metal and elastomer) to seal the surface surrounding the female thread.

REFERENCE SPECIFICATIONS:

- 1. BS 21 (BSPT)
- 2. DIN-2999
- 3. JIS B0203
- 4. ISO 7/1

ISO Tapered (Thread Sealant Required)

Hy-Lok tube fittings part numbers are easily understandable and basically composed of 3 groups as shown below.

| Designator | First | Second | Third |
|------------------------|---|--------------------|---------------------------------|
| Group | ① ① | 2 | 3 |
| Example 1 Example 2 | CTA CMC4 | -8 -4N | -BRAS -S316 |
| Exam 1 Exam 2 | Union Tee Male Connector With 1/4" OD | 1/2" OD 1/4 NPT | Brass 316 Stainless steel |

- 1. The first group in example 1 or former part of first group in example 2 ① designates the fitting type.
- The second group in example 1 ② designates either Hy-Lok tube end size of unions, union tees, crosses, etc.
 Where all Hy-Lok tube end sizes are the same or size of plugs, caps, nuts, etc. where only single end exists.
- 3. The latter part of first group in example 2 ① designates the Hy-Lok tube end size and the second group ② designates pipe thread / size, or Hy-Lok tube end size, or tube size of fittings other than the fittings applicable to example 1.
- 4. The third group designates the fitting material.
- 5. In tees shown below, "2" is referred to as run and "3" is referred to as branch.

^{*} NPT Threads are available upon request.

Thermocouple Male Connector

CMCT

Bore-through male connectors handle thermocouples or dip tubes with ease.

For correct part number, just add "T" as a suffix to CMC, the male connector designator.

Example: CMCT 12M-8R-S316 12mm tube O.D. x 1/2" ISO tapered stainless Steel 316

CMCT 8-8N-S316 1/2" tube O.D. x 1/2" NPT stainless steel 316

Note: There are some limitations in size available as it is impractical to bore through all male connectors. For availability, contact your local distributor.

⁺ The d dimension is the minimum nominal opening. These fittings may have a larger opening at the pipe/straight thread end.

① Furnished with nut and preswaged ferrules.

Male Adapter **CAM**

Hy-Lok Adapter eliminates difficult alignment problems.

It is required to install tubing to a female port in a certain direction as shown.

2. With pipe connection tight, the male elbow is directed to wrong direction.

3. To avoid this, simply tighten the pipe thread of male adapter into female port.

 Connect union elbow to male adapter by tightening the Hy-Lok nut while keeping the elbow in the desired direction, Then install the tubing into the other end of elbow.

Connects Fractional Hy-Lok Port to Female NPT Thread

^{*} NPT Threads are available upon request.

① Furnished with nut and preswaged ferrules.

Installation Instruction **Port Connectors**

Machined Ferrule End & Plug

While holding fitting body steady, tighten the port connector 1/4 turn from the finger-tight position. For 1/16", 1/8", and 3/16"; 2mm 3mm and 4mm tube fittings, tighten the port connector 1/8 turn. For over 1in. and over 25mm tube fittings, tighten the port connector one quarter turn.

Reassembly

You may disassemble and reassemble Hy-Lok port connectors many times. Make subsequent connections by slightly tightening with a wrench after snugging the nut by hand.

Tube adapter End

- 1.Insert the tube adapter into the Hy-Lok tube fittings until tubing end is firmlyseated on the body shoulder and make sure the nut is hand tight.(Fig.3)
- 2.Mark the nut at 9 o'clock position for identification of starting point.
- 3. Tighten the nut 1 1/4 turns* with a wrench keeping the fitting body steady with a back-up wrench, when the nut is tightened 1 1/4 turns, the mark at 9 o'clock position before tightening will be at 12 o'clock position.

Note*: Only 3/4 turn from finger tight is required for 1/16",1/8",3/16"2mm,3mm,and 4mm sizes.

Reassembly

See Hy-Lok tube fittings reassembly, page71

Features & Applications

1. Features

Assembly is easy and usability is superb than Hy-Lok Reducer Type tube fitting(CR) assuring the superior sealing by operating O-Ring. Also O-Ring is connected to Body nipple machined by 40° cone Ends and form O-Ring Seal by facing with Body 40° Taper. So Body Nipple should be assembled by this kinds of fact. It should be easy for storage and handling.

2. Applications

If the place where we assemble is quite narrow, its assembly could be easy and It should not only be applied for Metric and Imperial(Inch) Size but also apply a different type of shape(Union, Elbow, Tee).

Since it has a superb sealing feature, It should be satisfied with various customer by applying different territory which need safety like a Gas Line.

Assembly and Reassembly instruction for swivel fitting with O-Ring

Assembly instructions:

- 1. Thread the swivel nut assembly onto the Hy-Lok tube end until it is finger-tight.
- 2. Mark a line along the swivel nut and Hy-Lok tube end, parallel with the axis of the assembly, at the 6 o'clock position.
- 3. Hold the male Hy-Lok tube end steady and tighten the swivel nut with a wrench 1/4 turn past finger tight, to the 9 o'clock position.

Reassembly instructions:

- Prior to disassembly, mark a line along the swivel nut and Hy-Lok tube end, parallel with the axis of the assembly.
- For reassembly, rotate the nut with a wrench to the previously pulled-up position, as indicated by the marks on the swivel nut and Hy-Lok tube end.At this point, you will feel a significant increase in resistance. Tighten the nut slightly.

Caution

Do not use the Hy-Lok gap inspection gauge with swivel ends.

Flange Connector

Lapped Flange Connector **CFTC**

Hy-Lok Lapped flange connector provides safe and easy connections between process lines and instruments. It provides Hy-Lok tube connection ends by a lap joint pipe flange to ANSI B 16.5 or BS 1560. Both "smooth" and "serrated" surface finishes are available. For identification of serrated surface finish, groove is provided.

Pressure-Temperature Ratings

Ratings are taken from ASME B16.5-2003, Table 2-2.2 and Table F2-2.2

Pressure ratings for fittings with a flange end connection and another end connection are determined by the connection with the lower pressure rating.

Adjustable SAE/MS Straight Thread Fittings

These adjustable or positionable fittings are useful in that the direction of Hy-Lok tube fittings end can be oriented into desired direction with ease. They can be installed on tanks or vessels without welding or brazing. Viton O-ring is standard, and other materials are available upon request.

Installation Instructions

Lubricate O-ring with lubricant compatible with system and O-ring material and place it over the groove close to the metal backup washer.

Fig. 1 Lock Nut Backed Off

2. Screw fitting into the SAE straight thread boss until the washer contacts the face of the boss.

Fig. 2 Fitting Installed Hight

3. Position the fitting by backing it out no more than one turn.

Fig. 3
Fitting Backed Off for
Alignment
(1 Turn Maximum)

Hold the fitting in position and tighten the lock nut until the washer contacts the face of the boss.

Fig. 4
Fitting Lock Nut Tightened to Appropriate Torque

- a. Diameter U shall be concentric with thread pitch diameter within 0.13 full indicator reading(FIR), and shall be free from longitudinal and spiral tool marks. Angular tool marks up to 2.5 Micro meter max. shall be permissible.
- b Maximum recommended spotface depth to permit sufficient wrench grip for proper tightening of the fitting or locknut.
- c. If face of boss is on a machined surface, dimensions Y and S need not apply as long as R 0.25/0.375 is maintained to avoid damage to the O-Ring during installaton.
- d. Tap drill depths given require use of a bottoming taps to produce the specified full thread lengths. Where standard taps are used, the tap drill depths must be increased accordingly.
- e. Figures are for reference only, as any boss can be used for a tubing size depending upon other design criteria.

O - Ring Dimensions for SAE / MS Bosses

Standard O-Ring is Viton other materials are available upon request.

[†] The d dimension is the minimum nominal opening. These fittings may have a larger opening at the pipe/straight thread end.

^{*} ISO Paralled Threads are available upon request.

† The d dimension is the minimum nominal opening. These fittings may have a larger opening at the pipe/straight thread end.

O-Seal Connectors

Hy-Lok O-seal Fittings can be directly installed into existing pipe thread or straight thread port.

Due to short thread length, thread interference which is common on tapered thread does not occur and the leak tight seal is made by O-ring.

The standard Viton O-ring is fully contained in a precision groove. The groove provides anti-extrusion of O-ring at high pressure and controlled squeeze for vacuum tight sealing. To provide a leak tight installation, smooth flat surface perpendicular to the axis of the threads is required.

Installation Instructions

- 1. Hand tighten the O-Seal fittings in the port until O-ring compresses on the port.
- 2. the fitting with a wrench.

Note: When installing or disconnecting tubing to or from Hy-Lok tube end, make sure that the fitting body is always held by back-up wrench. By doing this, the fitting does not turn and the proper seal is maintained.

The illustrations and table below show required mounting dimensions for O-seal connectors.

Mounting Dimesions

[†] The d dimension is the minimum nominal opening. These fittings may have a larger opening at the weld end. Wall thickness at the weld end is based on schedule 80 pipe.

Welding Precautions

- If you weld the fully assembled fittings, the assembly can be distorted and the lubricant on the nut can be removed, which is not desirable.
- To avoid this, remove the nut and ferrules from the body and cover thread and seat area with another nut or a plug in
- order to protect them from weld splatter. (Jsut finger tighten for easy removal)
- Provide a proper heat sink for heat dissipation.
- After welding, replace the nut and ferrules.

Dielectric Fittings

CDF

The Hy-Lok Dielectric tube fittings are for use in applications where electrical current flowing through a pipe or tube line must be interrupted to protect vital instrumentation and metering euipment.

Features

- Metal components are machined from 316 stainless steel for use in rugged environments.
- Thermoplastic insulation with excellent electrical, chemical, ultraviolet resistance and low water absorption maintains dielectric strength and integrity over a wide range of operating and climate conditions.
- Gageable Hy-Lok tube fitting or tapered pipe thread end connections provide direct connection to tubing or piping system.

Materials

■ Body : 316 stainless steel

Insulations : PEEK

Quad seal(O-ring) : 70 durometer VITON

■ Backup ring : Virgin PTFE

Benefits

- Maximum safety and protection to critical monitoring station instrumentation.
- Long component life in rugged environment.
- Maximum flow capability provided by all sizes of Hy-Lok dielectric tube fittings.
- The unique value and performance offered by Hy-Lok tube fitting connections

Technical data

■ Electrical resistance of insulators @ $70^{\circ}F(20^{\circ}C)$: $10 \times 10^{6} \Omega$ @ $10 \times 10^{6} \Omega$

Pressure Rating: 5,000psig (344bar)

■ Temperature Rating: -40 to 200°F (-40 to 93°C)

Sure Ring Against Overtight **CCL**

Hy-Lok Sure Ring is especially useful when you install Hy-Lok tube fittings in a small space such as in a cabinet where it is practically impossible to apply the standard installation procedures. (i.e., 1 1/4 turns or 3/4 turn from finger tight) it ensures sufficient tightening and protects over-tightening. For installation, insert Sure Ring between the nut and the body before assembly, and then tighten the nut until being blocked by the sure ring.

Metric

| Part No. | Tube OD D | Tube ID D ₁ | Bore ID d |
|--------------|--------------|---------------------------|--------------|
| CI 6M - 4M | 6 | 4 | 2.4 |
| CI 8M - 6M | 8 | 6 | 4.8 |

| CI 12M - 10M | 12 | 10 | 8.3 |

Hy-Lok Tube Inserts are used to secure the nylon or other soft plastic tubing to Hy-Lok tube fittings.

To choose the proper Hy-Lok Tube insert, check if O.D. and I.D. of the tubing are the same as dimension D and D1 of tube inserts, respectively.

Tube Marker

CTDM

The strong point of Hy-Lok tube marker.

- 1. A Patenteol product.
- 2. Lightweight easy to carry.
- 3. No damage of the tube surface when inserting and detaching the tube.
- 4. The visible line on the tube ensures that the tubing is fully bottom thereby reducing any chance of leakage.

Instruction of Use

1. Insert the tubing into the tube marker.

 After inserting the tubing, press the marker lever and rotate the tube marker.

3. Release the marker lever and remove the tubing.

 Be position the tube on the cutting plane of the product and confirm whether the line on the tube is visible or not.

Insert the tubing into the Hy-Lok tube fittings and confirm that the line made by the tube marker is not visible. The tube is now properly inserted and the fitting can be tightened.

For Hy-Lok tube fittings installations in close quarters, the Hy-lok preswaging tool is a convenient accessory.

Tee Wrench CTW

Tube Deburring Tools CTDT

Multiple Size

| Part No. | Size < Tee or Cross > |
|----------|--------------------------|
| CTW-4 | 1/4 in. and 6mm |
| CTW-6 | 5/16 and 3/8 in. and 8mm |
| CTW-8 | 1/2 in. and 12mm |

[■] The tee wrench provides positive backup support when installing Hy-Lok union tees and crosses.

| Part No. | Size | |
|----------|--|--|
| CTDT | The inside and outside diameters of 3/16 to 1 1/2in 4 to 38mm tubing | |

When stainless steel, steel and hard alloy tubes are cut by tube cutter or tube sawing guide, the tube ends are deburred by Hy-Lok tools.

Operating Procedures

- 1. Assemble front ferrule, back ferrule, and the nut onto jig.
- 2. Insert the prepared tube into pre-assembled nut and ferrules and hand-tighten the nut. Pumping until arm release (manual), or just press. "start" switch(auto).
- 3. Unthread nut from swaging jig. Remove pre-swaged tube and insert it into fitting body. Make sure the ferrule seats in the fitting. (The detailed instructions are provided for each of EZY-MAT TOOL.)

| EZY - MAT 2 | 1/2" to 2" (12mm to 38mm) | Auto |

JIG and DIE

| Basic Part No. | Size Designator | Remark |
|----------------|-----------------|---------|
| PS - CSJ - * | See below - * | for Jig |
| PS - CSD - * | See below - * | for Die |

Note*: To complete part number, basic part No. must be followed by size designator.

For fractional size, designate size in hexadecimal and then add T, e.g. 20T for 1 1/4 inches.

For metric size, designate size in millimeters and then add M, e.g. 28M for 28mm.

Pump Hose

Applications

• Applications include fire prevention systems, gas supply systems, gas mixing systems, pressure systems, fire alarm systems, liquid pumps and safety release systems.

Features

- Available in brass or 316 stainless steel. The fittings are filled with eutectic material which has melting points of 160°F (71°C), 255°F (124°C), or 281°F(138°C). Melting temperatures are stamped on each points.
- Fittings availble in pipe plug, Hy-Lok cap, Hy-Lok plug and Tube adapter configuration
- Sizes available are 1/4", 3/8" and 1/2" NPT and tube
- · All fittings machined from barstock
- Maximum working pressure is 250psig(17.3bar)

Pipe Plug H-SPBFM

| Part No. | Pipe Size | L | E | Width across flat H (in.) |

| CFSP - 8 | 1/2 | 19.6 | 8.7 | 7/8 |

Installation Instructions

Tube Preparation

- Check if tubing O.D., wall thickness, ovality, hardness and their tolerances are within specs for your application. Also check if surface is free from scratches and dirt.
- Make a square cut, (Always use proper tube cutter. Improper tube cutter can cause excessive tube deformation at the tube end.)
- 3. Remove burrs from inner and outer edges of tubing.

Installation Instructions for Hy-Lok tube fittings of 1 inch or 25mm and Under

Hy-Lok tube fittings are supplied fully assembled / finger tight and are readily usable. A leak tight and mechanically safe installation is easily made by turning the nut 1 1/4 turns or 3/4 turn for smaller sizes.

 Insert prepared tubing into Hy-Lok tube fittings until tubing end is firmly seated on the body shoulder making sure the nut is fingertight. (Do not force the tubing into fitting if it does not go in easily. It may be burred or oval, or there may be foreign materials inside the fitting.)

- Mark the nut at 6 o' clock position for identification of starting point.
- 3. Tighten the nut 1 1/4 turns* with a wrench keeping the fitting body steady with a backup wrench. When the nut is tightened 1 1/4 turns, the mark at 6 o'clock position before tightening will be now at 9 o'clock position.

Note*: Only 3/4 turn from finger - tight is required for 1/16", 1/8", 3/16", 2mm, 3mm, and 4mm sizes.

High Pressure Applications

Even though Hy-Lok tube fittings are designed to accept the tube variations specified in ASTM or equivalent specifications, it is more desirable to have a common starting point, or snug position, for high pressure applications. Making sure that the tubing end is fully seated, tighten the nut until the tubing can not be rotate by hand. 1 1/4 turns (or 3/4 turn for small size fittings) from snug position will ensure reliable leak tight installation.

Reassembly Instructions

Hy-Lok tube fittings can be disassembled and reassembled many times and leak tight performance can be obtained each time.

- Insert tubing which is preswaged with ferrules into fitting body.
 Hand tighten the nut and further tighten the nut with a wrench
- to the original position keeping the body steady with a backup wrench, When a sharp rise in resistance is felt at the original position, snug slightly with a wrench.

Note: Do not use the gap inspection gauge with reassembled fittings.

Installation of Hy-Lok tube fittings larger than 1" or 25mm

EZY-MAT TOOL, Hy-Lok Corporation's Hydraulic Preswaging Machine, designed for use all Hy-Lok tube fittings ranging from 1/2" to 2" (12mm to 38mm).

Hy-Lok Hydraulic Preswaging Unit for Multi - Size Tubes - EZY - MAT TOOL

EZY-MAT TOOL is easy to learn and to operate. With the manual model, the hand pumping requires very little effort the swage indicator arm lets you know when to stop pumping. With the automatic model, preswaging is accomplished by pressing and releasing the start button according to the instruction.

EZY-MAT TOOL can be used for various tube sizes by replacing jig and cone. Two manual models(or just one automatic model) are required for all sizes ranging from 1/2 inch to 2 inch(or 12mm to 38mm).

The tool is compact, lightweight, and easy to use.

EZY-MAT TOOL reduces make-up torque and assembly time in the field and prevents the fitting from deformation and damage.

DOs

- DO use Hy-Lok tube fittings for best performanance.
- DO send us tubing for testing if the wall thickness is thinner or heavier than recommended.

DO deburr tubing properly prior to installation.

- DO use correct tube cutter to avoid excessive
- deformation.

DO ensure tubing is firmly seated on the shoulder

• of fitting body.

DO tighten nut according to the installation

• instructions.

DO use SURE RING where Hy-Lok needs be

• installed in close corners or in awkward places.

DO ensure components are clean and free from

• dirt prior to installation or remake.

DON'Ts

- DON'T mix metric and fractional size of fitting or tubing.
- DON'T mix components of different materials.

DON'T force tubing into fitting if it does not fit easily. Check tubing.

DON'T turn fitting body, turn nut while holding

• body with back-up wrench.

DON'T over tighten. It will not improve seal

 integrity and may cause material fatigue and remake difficult.

DON'T bleed system pressure by loosening the

• nut.

SAFETY in FITTING SELECTION

For proper, safe, trouble-free installation, operation and maintenance of fluid systems, material compatibility, pressure/temperature ratings, and application details must be considered in the selection of fittings. Improper selection or intermixing components of other manufactures may cause personal injury or property losses. It is the responsibility of system designer and user to select and use the products for their specific applications.
